

What is COOLEX ?

COOLEX serves as an instrument for suction, isolation, retraction, dehumidification and also acts as a mouth opener. COOLEX does not only eliminate the use of rubber dam or other isolation equipment, but also creates an ideal environment for adhesive, endodontic, crown & bridge, or other dental procedures.

16,432 COOLEXs were produced in Japan (1998-2007).

A lot of famous Japanese dentists, especially the specialists, use and recommend COOLEX.
